

RDV floating network license installation instructions

- Select any computer on your network as a license server
- Download* and install HASP HL drivers on the license server
- Plug-in the HASP HL hardware lock (dongle), that you received from RDV
- Download* and install License manager on the license server
- Please note that if you using firewall on your network, then TCP and UDP ports number 475 should be opened.
- Next time you run RDV it will automatically recognize the network license.

*You may download all the necessary files from our WEB site's "Resources" section on the downloads page : http://www.rdvsystems.com/dl_resources.php
